

Fund Description

The Lido Advisors Core ETF ESG Strategy seeks to provide investors with efficient, effective and intelligent exposure to the US equity markets at a low cost, while ensuring that underlying holdings meet the highest broad based Environmental, Social and Governance standards. To meet these goals, the strategy invests in 5 low cost ETFs across all parts of the US equity markets. The ETF's track the MSCI TIAA ESG Indices that screen for factors like carbon footprints, controversial business activities, global sanctions and more.

Past performance is not an indication of future returns.

Not all investments are suitable for all clients. It should not be assumed that any security listed or any recommendations made in the future will be profitable or without loss or will equal the performance of the strategies on this list. All investments involve the risk of potential investment losses including the risk of loss of principal. Further, the prior performance figures indicated herein represent portfolio performance for only a short time period and may not be indicative of the returns or volatility each portfolio will generate over a long time period. The performance of the portfolios should also be viewed in the context of the broad market and general economic conditions prevailing during the periods covered by the performance information. Any references to future returns/ risk are not promises of the actual return the client portfolio may achieve. Before investing, investors should seek financial advice regarding the appropriateness of investing in any securities or investment strategies discussed.

Investment returns will fluctuate and are subject to market volatility, so that an investor's shares, when redeemed or sold, may be worth more or less than their original cost. ETFs may have investment objectives other than matching a particular market index and are subject to risks similar to those of stocks. The market price of ETFs traded on the secondary market is subject to forces of supply and demand and thus independent of NAV. This can result in the market price trading at a premium or discount to NAV, which will affect investor's value. There is no certainty that any investment or strategy will be profitable or successful in achieving investment objectives.

ETFs are subject to various administrative fees, which are explained in detail in the prospectus. These fees are incurred in addition to any fees paid for portfolio management.

All content herein has been obtained from sources deemed to be reliable, but is subject to unintentional errors, omissions, and changes without notice, and is not warranted as to its accuracy or completeness. You should not rely on the information contained herein, and should rely solely on, and carefully read, the appropriate offering and related subscription materials or prospectus relating to any specific investment product before making any investment decision.

The information in this report is for informational purposes only and should not be relied upon as the basis of an investment or liquidation decision. Nothing in this report shall be construed to be a solicitation to buy or offer to sell any security, product or service to any non- U.S. investor, nor shall any such security, product or service be solicited, offered or sold in any jurisdiction where such activity would be contrary to the securities laws or other local laws and regulations or would subject Lido to any registration requirement within such jurisdiction.

Please contact Lido for more information on this methodology or the performance of this strategy. For current performance information, including performance to the most recent month-end, please contact Lido.

The inception date for the Lido Advisors, LLC Core ESG Portfolio is April 15, 2019. As calculations from Addepar are based on monthly intervals, the calculations illustrated in this document begin on April 30, 2019.

Growth of \$10,000 Comparison Graph

This graph shows model and/or index performance based on how \$10,000 invested in the model/index would have grown over time with dividends reinvested. The growth of \$10,000 begins at April 30, 2019.

This graph compares the historical return and risk characteristics of the Core ETF Portfolio Strategy and the S&P 1500 Index from the inception of the model through 9/30/2020. The risk is defined by standard deviation. S&P 1500 Index included for illustrative purposes only.

Benchmark/Major Indices: The past performance of an index is not a guarantee of future results. Any benchmark is shown for informational purposes only and relates to historical performance of market indices and not the performance of actual investments. The benchmark is not managed and does not reflect the deduction of any fees and expenses, which will lower results. Indices are not actively managed, and investors cannot directly invest in indices. The portfolio's investment strategy is not restricted to securities in the benchmark. Further, there is no guarantee that an investor's account will meet or exceed the stated benchmark. Index performance information has been obtained from third parties deemed to be reliable. We have not independently verified this information, nor do we make any representations or warranties to the accuracy or completeness of this information. (Source: Lido Advisors, LLC.)

S&P 1500 Index: The S&P Composite 1500® combines three leading indices, the S&P 500®, the S&P MidCap 400®, and the S&P SmallCap 600®, to cover approximately 90% of U.S. market capitalization. It is designed for investors seeking to replicate the performance of the U.S. equity market or benchmark against a representative universe of tradable stocks. (Source: S&P Dow Jones Indices).

Alpha: The excess return of a fund or model relative to the return of a benchmark index. The benchmark used for these visuals is the S&P 500 Index.

Beta: Beta is a measure of the volatility, or systematic risk, of a security or a portfolio in comparison to the market as a whole.

Correlation: A statistic that measures the degree to which two securities move in relation to each other.

Downside Capture: The down-market capture ratio is a statistical measure of an investment manager's overall performance in down- markets. The down-market capture ratio is used to evaluate how well or poorly an investment manager performed relative to an index during periods when that index has dropped.

Exchange-Traded Fund (ETF): An ETF is a marketable security that tracks an index, a commodity, bonds, or a basket of assets like an index fund. ETFs trade like a common stock on a stock exchange and experience price changes throughout the day as they are bought and sold.

Information Ratio: A measurement of portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns.

Sharpe Ratio: The average return earned in excess of the risk-free rate per unit of volatility or total risk.

Standard Deviation: A statistic that measures the dispersion of a dataset relative to its mean and is calculated as the square root of the variance.

Tracking Error: The difference between the return an investor receives and that of the benchmark they were attempting to imitate.

Upside Capture: The up-market capture ratio is the statistical measure of an investment manager's overall performance in up-markets. The up-market capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen.
